

Police Officer Allocation Report

This optimization system strategically deploys police officers based on actual crime data rather than equal distribution. It ensures smart resource management by positioning officers where they prevent the most crime while protecting taxpayer resources. The system makes evidence-based decisions that remove guesswork, and maintains officer wellbeing by avoiding unnecessary over-deployment in low-crime areas that would cause fatigue and reduce operational effectiveness.

Ward: E05009317

Period: 2025-01-01 (January 2025)

Crime Density Analysis

Crime Density: 0.97
Crime Level: LOW
Time Weight Scaling: 0.80x

Officer Allocation by Time Slot

Time Slot	Weekday Officers	Weekend Officers
06-08	2	1
08-10	4	1
10-12	6	1
12-14	8	4
14-16	9	6
16-18	9	6
18-20	8	4
20-22	6	3

Key Recommendations

1. Focus additional resources on high-crime density wards
2. Maintain higher staffing during 14-16 time slot (early peak crime period) and 16-18 time slot (late peak crime period)
3. Monitor and adjust based on actual crime patterns
